Companion open kit: **banana-prompt-kit/**
English edition for SEO & creator distribution

Table of Contents

1. How modern text-to-image prompts work
2. Prompt formula & anti-patterns
3. Channel-specific playbooks
4. Conversational edit recipes
5. Aspect ratios & export
6. Mini comparison framework
7. Twenty ready-to-copy prompt examples
8. End-to-end workflow
9. Resources

This playbook is designed to be bookmarked and cited—not skimmed as a checklist stub. Every section includes usable templates you can paste into Banana Pro AI today.

1. How modern text-to-image prompts work

Modern image models do not understand sentences the way a human does. They map language into a visual latent space. The clearer you separate **what** is in the scene from **how** it should look, the more control you get on the first generation—and the fewer expensive regeneration loops you burn.

Five building blocks

Block	Purpose	Example fragments
Subject	Who or what is primary	matte black wireless earbuds in charging case
Attributes	Material, color, mood, condition	brushed aluminum, soft cyan LED, dew droplets
Composition	Camera, framing, layout	45° product hero, centered, negative space left
Style	Look & feel / medium	studio product photography, softbox, catalog
Constraints	Hard rules & exclusions	no text, no watermark, pure white #FFFFFF

Why order and density matter

- Put the **subject first**. Models overweight early tokens.
- Use **concrete nouns and measurable adjectives** (“soft key light from camera-left”) over vague praise (“beautiful, amazing, masterpiece”).
- Prefer **one clear scene** per prompt. Multiple conflicting subjects dilute fidelity.
- Treat style keywords as **direction**, not magic spells. “Cinematic” without lighting or lens cues is weak.

Banana Pro AI strengths to lean on

Banana Pro AI is built for text-to-image with strong subject fidelity; conversational editing so you iterate without retyping the whole prompt; 2K/4K exports for ads and print-adjacent use; typography in images when you need readable on-image text; character consistency across a set; and multi-reference guidance when you have product or character refs. Use references when brand fidelity matters; use conversation when you need surgical fixes (hands, background, copy).

2. Prompt formula & anti-patterns

Core formula

Core prompt formula

```
[Subject + key attributes]
+ [Setting / context]
+ [Composition: angle, framing, depth]
+ [Lighting] + [Style / medium] + [Color / mood]
+ [Technical: resolution, aspect] + [Constraints]
```

```
[Subject + key attributes]
+ [Setting / context]
+ [Composition: angle, framing, depth]
+ [Lighting]
+ [Style / medium]
+ [Color / mood]
+ [Technical: resolution cues, aspect intent]
+ [Constraints / negatives]
```

Compact template

```
[SUBJECT], [2-4 attributes], [setting],
shot as [composition], [lighting],
in the style of [style], [mood/palette],
[constraints].
```

Worked example (e-commerce)

```
Matte ceramic pour-over coffee dripper in charcoal gray, single piece,
on a light oak cutting board with scattered coffee beans,
45-degree hero angle, shallow depth of field, soft window light from left,
commercial product photography, neutral warm palette,
pure seamless background, no logos, no text, no hands.
```

Anti-patterns (and fixes)

Anti-pattern	Why it fails	Fix
Keyword stuffing ("8k uhd masterpiece...")	Noise; little composition signal	Use camera, light, and layout cues
Conflicting styles (anime + photoreal)	Model averages into mush	One primary style; one accent max
Invisible subject ("a vibe of luxury")	No renderable noun	Name the object and materials
Unspecified text ("add catchy headline")	Glyphs invent themselves	Quote exact words + placement
Overlong novels	Dilutes priority	≤ ~60–120 words; edit via chat
No constraints	Extra limbs, watermarks, clutter	Explicit negatives / clean bg
Skipping aspect intent	Awkward crop later	State use case or ratio early

Strategy: Generate with a strong first prompt, then edit with short conversational instructions. Avoid regenerating from scratch for small fixes—you lose consistency.

3. Channel-specific playbooks

3.1 E-commerce product

Goal: Trust, clarity, convert. Use a hero angle with true materials, controlled reflections, and safe margins for price badges. Prefer 1:1 or 4:5 for marketplace grids.

[Product full name], [material/finish], [hero angle],
studio softbox lighting, accurate color, commercial catalog photo,
[background: pure white OR lifestyle surface],
no props unless brand-relevant, no text, no watermark.

3.2 YouTube thumbnail

Goal: Stop the scroll in ~0.3s. One dominant face or object, high contrast, readable 3–5 word title, exaggerated emotion. Use 16:9; keep faces large; avoid fine detail that dies at small size.

Close-up of [creator/character] with [clear emotion],
high-contrast [background color], dramatic key light,
YouTube thumbnail composition, large negative space for title on right,
bold simple shapes, sharp focus on eyes, 16:9.
Text on image: "[EXACT TITLE]" in bold sans-serif, high contrast.

3.3 Social ad (Meta / TikTok / LinkedIn)

Goal: Message + product in one glance. Pair the product with a benefit visual metaphor. Use 1:1 for feed and 9:16 for stories/reels. Keep clutter minimal; if text is in-image, use a short high-contrast claim.

3.4 Character sheet

Goal: Consistency across poses and scenes. Lock age, hair, outfit, and distinguishing marks. Use neutral lighting for turnarounds and the same camera height across views. Lean on multi-reference or character-lock features when available.

Character design sheet of [name/description], [age], [hair], [outfit],
front view, three-quarter view, side view, on clean white background,
consistent proportions, concept art, even studio lighting, no text.

3.5 Educational diagram

Goal: Clarity over spectacle. Prefer flat or isometric views with labeled regions, a limited palette (3–5 colors), and explicit label strings in quotes. Simple shapes beat photoreal noise for teaching.

4. Conversational edit recipes

After the first generation, talk to the model like a retoucher. Banana Pro AI's conversational editing is designed for surgical changes without discarding what already works.

Problem	Say something like...
Broken hands / fingers	"Fix the hands: five fingers each, natural pose, matching existing lighting."
Garbled on-image text	"Replace headline with exactly: 'SHIP FREE TODAY'. Bold white sans-serif, same position."
Busy / wrong background	"Remove clutter. Soft gradient brand blue #0B3D91 to white. Keep subject."
Flat lighting	"Add soft key light from camera-left and gentle rim light; preserve colors."
Crop too tight	"Zoom out 20%, keep subject centered, more margin on all sides."
Color drift	"Match product color to charcoal gray #36454F; reduce blue cast."
Extra objects	"Remove the second bottle and the plant. Keep only the hero product."
Face inconsistency	"Keep the same face and hairstyle as the reference; only change expression."
Soft / muddy detail	"Increase micro-contrast on edges; keep fabric natural, no oversharpen halo."
Wrong aspect feel	"Reframe for 9:16 vertical: subject in upper third, clean space below for CTA."

Rules of thumb

- One change per message when possible.
- Quote exact strings for typography.
- Reference hex colors and brand terms.
- Say what to **keep** as well as what to change.

5. Aspect ratios & export

Ratio	Typical use	Notes
1:1	Instagram feed, marketplace tiles, avatars	Safest default for catalogs
4:5	IG portrait feed	Slightly more vertical real estate
16:9	YouTube, presentations, blog heroes	Thumbnails & headers
9:16	Stories, Reels, TikTok, Shorts	Face/product in upper third
3:2 / 2:3	Editorial, print-adjacent	Check bleed if printing
21:9	Ultra-wide banners	Keep subject away from extreme edges

Resolution guidance

Label	Approx.	Use when
2K	~2048px on long edge	Social ads, web heroes, most marketing
4K	~3840px on long edge	Large banners, detail crops, print-ish proofs

Export checklist

1. Confirm ratio matches channel.
2. Export 2K for draft review; 4K for final paid placements when detail matters.
3. Keep a high-quality master; compress derivatives per platform.
4. Strip accidental watermarks; verify text spelling at 100% zoom.
5. Run a brand check: logo clearspace, palette, prohibited claims.

6. Mini comparison framework

When evaluating any AI image tool (including Banana Pro AI), score **your** workflows—not hype lists. Avoid spammy “top 20 tools” ranking. Run the same five briefs across two or three candidates and score each criterion 1–5 with evidence.

Criterion	What “good” looks like	Questions to ask
Subject fidelity	Product/character matches brief	Can it keep SKU color and shape?
Edit loop	Conversational or localized edits	Do small fixes require full regen?
Typography	Readable short headlines	Can you lock exact strings?
Consistency	Same character/product across a set	Multi-ref or character lock?
Resolution	Usable 2K/4K	Soft when upscaled?
Speed / cost	Fits production cadence	Latency under deadline pressure?
Commercial terms	Rights clear for ads	What does the ToS allow?
Safety / brand	Controllable refusals & audits	Can you enforce brand negatives?

Prefer evidence over affiliate roundups. Document prompts, seeds/refs, and failure modes so your team can reproduce decisions next quarter.

7. Twenty ready-to-copy prompt examples

Copy each prompt, swap bracketed variables, generate in Banana Pro AI, then iterate with conversation. Full packs with notes live in [banana-prompt-kit/prompts/](#).

E-commerce

1. Clean packshot

Frosted glass serum bottle 30ml with white pump, label area blank, centered on pure white seamless background, soft dual softbox, subtle contact shadow, commercial beauty product photo, accurate frosted texture, no text, no hand, no logo.

2. Lifestyle kitchen

Stainless steel chef's knife with black pakkawood handle on marble counter, shallow depth of field, morning window light, lifestyle product photography, herbs softly blurred in background, appetizing but uncluttered, no people.

3. Apparel ghost-mannequin feel

Navy merino wool crewneck sweater, invisible mannequin product shot, even studio lighting, true navy color, fabric knit detail visible, light gray background, e-commerce catalog style, no hanger, no model head.

4. Electronics desk setup

Compact USB-C hub in space gray aluminum on a tidy walnut desk, top-down 30-degree angle, soft daylight, cable tips neatly arranged, tech product photography, minimal Scandinavian workspace, no screens on.

YouTube / thumbnails

5. Shock-value face thumbnail

Close-up of a surprised creator facing camera, raised eyebrows, mouth open, bright yellow background, high contrast, YouTube thumbnail style, 16:9, large empty space on the right for title text, sharp eyes, dramatic rim light. Text: "I WAS WRONG" in huge bold white letters with thick black outline.

6. Before/after split

Split-screen thumbnail: left dull messy desk, right bright organized desk, bold center divider, high saturation on the right, 16:9 YouTube thumbnail, clear visual contrast, space at top for short title. Text: "FIX YOUR DESK" bold sans-serif top center.

7. Tutorial object focus

Macro shot of hands holding a vintage film camera, instructional vibe, clean teal backdrop, bright even light, 16:9, subject left-third, room for text on right, educational YouTube thumbnail, no busy patterns. Text: "START HERE" in bold cream letters.

8. Gaming energy

Dynamic 3/4 view of a stylized armored game character mid-stride, neon cyan and magenta rim lights, dark moody background, 16:9 thumbnail, exaggerated perspective, high clarity silhouette, space upper-left for title. Text: "NEW BOSS" bold condensed font, high contrast.

Social ads

9. Feed ad — product + claim

Hero shot of reusable stainless water bottle in matte sage green, soft gradient background sage-to-cream, centered, Instagram ad 1:1, gentle shadow, premium eco brand feel, room above bottle for headline. Text: "Hydration, simplified." elegant sans-serif, dark gray.

10. Story / Reel vertical

9:16 vertical ad: skincare dropper bottle in foreground, soft bokeh bathroom, subject in upper third, creamy light, Gen-Z clean aesthetic, large lower third empty for swipe CTA, no tiny text. Text near top: "Glow in 7 days" bold.

11. LinkedIn B2B

Clean isometric illustration of a secure cloud dashboard on a laptop, soft blue corporate palette, ample whitespace, LinkedIn ad feel cropped to 16:9, professional, no cartoon mascots, subtle geometric accents. Text: "Audit-ready in one click."

12. Flash sale energy

Top-down flat lay of sneaker, shopping bag, and stopwatch on bold red paper, hard sunlight shadow, high energy sale creative, 1:1, simple geometric composition, strong focal sneaker. Text: "48:00:00 LEFT" in bold white with black shadow.

Characters

13. Consistent brand mascot

Friendly fox mascot in a small blue scarf, flat vector-inspired 3D, soft rounded shapes, centered character turnaround on white, consistent eye style, children's brand mascot, even lighting, no text, high clarity outline.

14. App game protagonist

Young explorer with copper short hair, teal jacket, leather satchel, determined smile, full-body character concept, neutral gray background, game art, consistent proportions, front view, soft studio light, no weapons, no text.

15. Podcast host caricature

Stylized semi-realistic portrait of a podcast host with round glasses and coily hair, warm key light, subtle studio mic in frame, square composition, friendly approachable mood, limited background blur, podcast cover art vibe.

16. Multi-outfit look

Same female character, mid-20s, silver bob haircut, light freckles, calm expression, outfit variation sheet: casual tee, winter coat, formal blazer, white background, identical face and hair across three panels, fashion character sheet.

Educational / diagrams

17. Process diagram

Flat educational diagram of a 4-step coffee brewing process, numbered 1-4 left to right, simple icons, pastel palette, large readable labels, white background, infographic style. Labels exactly: "Grind", "Bloom", "Pour", "Serve".

18. Exploded technical view

Exploded-view diagram of a mechanical pencil, parts separated with thin leader lines, clean technical illustration, white background, muted blue accents, textbook clarity. Labels: "Tip", "Lead", "Grip", "Eraser".

19. Comparison cards

Side-by-side comparison cards: "Draft" vs "Final", left grayscale messy sketch, right colorful polished UI mockup, flat design infographic, 16:9, clear headers, minimal icons, high readability for slides.

20. Customer journey map

Simplified isometric map of a customer journey: Awareness → Consideration → Purchase → Loyalty, soft pastel tiles, arrows between stages, presentation diagram, generous spacing, no tiny text. Stage labels exactly as written above.

8. End-to-end workflow

Brief → Generate → Iterate → Brand check → Export

Brief → Generate → Iterate → Brand check → Export

Step-by-step

1. Brief (5–10 min). Audience, channel, ratio, must-have objects, forbidden elements, exact on-image copy, brand colors (hex).

2. Generate. One strong prompt using the formula. Generate 2–4 variations if available; pick a base.

3. Iterate (conversation). Surgical edits: hands, text, background, lighting, crop. One request at a time. Lock what already works.

4. Brand check. Spelling of on-image text; color vs. brand hex; logo clearspace / no fake logos; claims compliant; no artifacts at 100% zoom.

5. Export. Correct ratio → 2K review → 4K final if needed → platform-compressed derivatives → archive prompt + seed/ref notes in your kit.

Team tip: Store winning prompts in `banana-prompt-kit/prompts/` with variables documented. Treat prompts like ad copy: version them.

Stage	Owner	Artifact	Exit criteria
Brief	Marketer / PM	1-pager + hex + copy	No ambiguity on subject/ratio
Generate	Creator	2–4 candidates	One base selected
Iterate	Creator	Edit chat log	Artifacts fixed; intent matched
Brand check	Brand / legal lite	Checklist pass	Spelling, color, claims OK
Export	Creator	2K/4K + derivatives	Channel-ready files archived
